## LETTER OF TRANSMITTAL.

---

THE PANAMA CANAL,  
DEPARTMENT OF HEALTH,  
*Ancon, Canal Zone, June 10, 1914.*

GOVERNOR OF THE PANAMA CANAL,  
*Culebra, Canal Zone.*

SIR: I have the honor to submit the following report of the operations of the department of health for the month of May, 1914.

Very respectfully,

CHAS. F. MASON,  
*Chief Health Officer.*

---

### GENERAL REMARKS.

On April 1 the department was reorganized on a permanent basis for the operation of the Panama Canal. The name of the department was changed from "sanitary department" to the "department of health," the "chief sanitary officer" becoming the "chief health officer." The positions of assistant chief sanitary officer and chief sanitary inspector were abolished, the general inspector under the new organization performing all the duties heretofore belonging to the office of the chief sanitary inspector.

The positions of chief quarantine officer and health officer of Panama, heretofore held by one official, were separated. The chief quarantine officer becomes also the quarantine officer of Panama.

The accounting of the department of health and the cashier at Ancon Hospital were put under the jurisdiction of the auditor.

During the month of May the districts of Porto Bello and Toro Point were closed and the forces of the department of health withdrawn.

### DIVISION OF HOSPITALS.

#### EMPLOYEES.

The health of the employees has continued good during the month. No cases of yellow fever, smallpox, or plague originated on or were brought to the Isthmus during the month. The number of names on the rolls for the preceding month was 48,039.

The total number of admissions to hospitals and quarters was 1,633, or a rate of 407.92 per thousand per annum, as compared with 350.59 for the preceding month, and 468.59 for the corresponding month of last year.

The total number of deaths from all causes was 39. Of these 23 died from disease, or 5.74 per thousand per annum, as compared with 5.52 for the preceding month, and 5.42 for the corresponding

month of last year. The diseases causing the largest number of deaths were as follows: Lobar pneumonia, 7; and tuberculosis, 6. No other disease caused more than one death.

The number of employees per thousand constantly sick was 11.65, compared with 12.07 for the preceding month, and 15.35 for the corresponding month of last year.

The admission rate to hospitals for malaria was 50 per thousand per annum, as compared with 36 for the preceding month, and 36 for the corresponding month of last year; 21 per cent of all admissions were due to this cause.

The next highest admission rate was due to diseases of the digestive system and the respiratory system, each having the same number of admissions, and the next to venereal diseases. These four classes of diseases caused 47 per cent of all admissions.

The discharge rate for typhoid fever per thousand per annum was 0.75, compared with 2.26 for the preceding month, and 1.20 for the corresponding period of last year.

#### EFFECTS OF RACE.

The admission and death rate for disease for black employees were 124.70 and 5.95 per thousand per annum, as compared with 393.37 and 4.66 for white employees. The noneffective rate for disease and injuries for black employees per thousand was 9.94, as compared with 20.55 for white employees.

The admission rate for malaria was 42.56 per thousand per annum for blacks as compared with 87.07 for whites.

The much higher admission and noneffective rates for whites as compared with blacks is no doubt due to the fact that the whites receive pay for 24 days per year while sick from disease, while the blacks do not.

#### DEPORTATIONS.

There were 16 deportations accomplished during the month, divided as follows: Employees, 15; nonemployees, 1; for disease, 8; and injury, 8.

#### CANAL ZONE.

The number of persons, white and colored, living in the Canal Zone is estimated at 54,755, among whom there were 70 deaths, giving a ratio of 15.34 per thousand per annum, as compared with 13.49 for the preceding month and 13.92 for the corresponding period of last year.

#### PANAMA CITY.

In Panama City, with an estimated population of 47,172, there were 145 deaths, giving a ratio of 36.89 per thousand per annum, compared with 32.82 for last month and 26.46 for the corresponding period of last year.

The higher death rate this year than last is largely due to the considerable emigration from the Canal Zone to Panama without any increase in the official population figures.

## COLON.

In Colon, with an estimated population of 20,232, there were 58 deaths, giving a ratio of 34.40 per thousand per annum, as compared with 21.95 for the last month and 21.95 for the corresponding month of last year.

## SANITATION.

## CANAL ZONE.

The malarial rate showed an increase over that of last month, though it has not been a great one. It is accounted for by four principal factors: First, the completion of contract work at Cano Saddle and the liberation of approximately 3,000 malaria-infected laborers in the zone during March, April, and May; second, the extensive breeding area for anopheles on a hydraulic fill lying between Ancon, Balboa, and Corozal, which area could not be treated; third, a markedly increased rainfall during April and May; fourth, the fact, that through resignations, leaves, and sickness, the number of sanitary inspectors in the zone was rapidly reduced so far that the ordinary close supervision of sanitary routine and special work was for a time impossible. The highest rate of malarial incidence was in the week ending May 16, since which time it is again declining.

There were three cases of typhoid during the month, two of them in negro laborers (waiter and dishwasher) in two hotel kitchens. No secondary cases resulted so far as known.

The cutting of the banks of the Pedro Miguel River, as noted in the last report, was continued during the month, though lately much delayed and made very expensive by reason of heavy rains.

A special effort has been made during the month to clean up the very dirty negro towns and suburbs, such as Golden Green, Comacho Old Empire, New Gatun, etc., with resulting improvement in their appearance and their sanitary condition, though neither is yet satisfactory.

The weakest point in the antimalarial work here is the treatment of the human carrier. The common tendency for a large part of the population, principally negro, is to take treatment for malaria only when in hospital, occasions that are as rare and brief as possible. The consequence is that there are many gamete carriers, probably several thousand, at all times ready to infect any malaria bearing mosquitoes that bite them. An effort is being made to have employees, at least, continue treatment for at least a month. Thus far, however, the result has not been very much of a success.

Detailed statistics are shown in Table XVII.

## PANAMA.

## DEATHS.

One hundred and forty-five deaths from all causes are chargeable to the city of Panama. Of this number, 128 deaths were from disease and 17 deaths from violence. Fifty-two per cent of the total deaths from disease were among children under 5 years of age, and the cause of death in the vast majority of these cases was malnutrition. There were 18 stillbirths.

## GARBAGE COLLECTION.

Night collection was started during the latter part of the month in the San Felipe district. This change from day to night service gave us the use of two extra teams during the day, which were needed for the satisfactory handling of the garbage in the more congested districts of the city. On account of the condition of the road leading to dump No. 1, we were compelled to abandon this dump, and dump No. 2 was started satisfactorily, but during the latter part of the month, we were gathering enough inflammable material in the city to cremate all garbage received at the dump before any fly breeding could take place.

During the coming month, the work of installing automatic self-closing covers on garbage cans will be started. The device adopted consists of a concrete base elevated about 3 inches above the surrounding surface and upon this base the can will be placed. The cover will be attached to the side of the building, the complete stand being located at a convenient point of access to the tenants of the building as well as the garbage collectors. This device will afford at all times, perfectly fitting covers for the garbage cans, and one source of food supply for rodents will be cut off.

## RAT CATCHING.

The trapping of rats from different parts of the city has been continued during the month, a total of 489 rats having been trapped, the vast majority of which were turned over to the board of health laboratory for examination for bubonic plague. All examinations to date have been negative.

The wire cage trap and the spring trap, baited with cheese and cooked meat, have been used exclusively in this work, no poison bait having been placed. In certain buildings with concrete floors where there were evidences that the rats had worked their way through breaks under the floors, formaldehyde and potassium permanganate was used to drive the rats out and our men killed them as they emerged from their harboring places.

Each of the inspectors in the four districts in the city has one laborer who gives two hours of his time each day to placing and collecting traps. Enough rats are caught to determine if plague is present among them. These rats come from all parts of the city and when sent to the laboratory are tagged, showing the locality in which they were secured.

## FLY BREEDING.

Fly breeding in the city of Panama is still extensive, especially in those localities where stables are located. The majority of stables in the city are in a very bad state of repair and no permits for repairs will be given until the question of segregating the stables is settled. It has been the custom of the stable owners to give away all the manure from the stables to be used as fertilizer on the potereros and gardens near the city. Under section No. 66 of the sanitary rules and regulations, this office has directed that the manure from all stables be collected at least once in every 24 hours and taken to the dump to be cremated there. These orders are

being complied with and fly breeding in and around the stables has been reduced. Fly eradication work is being carried on in all parts of the city. The congested tenement districts are receiving special attention and it has been necessary to cause the arrest of several property owners for maintaining insanitary conditions on their premises, in which fly breeding was found. The population of these districts is more or less a floating one, and insanitary conditions are to be expected with greater frequency than in the more settled sections of the city.

Three Bath fly traps have been placed in the public market, in the fish section where flies are most numerous. The bait used to attract the flies was sirup, honey, etc., the idea being to give the flies a different bait from that to which they were accustomed. The traps have been successful in catching large numbers of flies, and additional traps will be placed throughout the market when they can be secured.

#### STREET CLEANING.

All the streets in the city have been cleaned twice a day except on Sundays and holidays, when the street men worked only half a day. The hours of work for the street men have been increased from 9 to 10 on the principal streets where the traffic is heavy. Under the old schedule there was a period from 11 a. m. to 12.30 p. m. when no street sweeping was done, and it is during this time that the traffic was heaviest on certain streets. Under the present schedule, there is only half an hour, from 12 noon to 12.30 p. m., when the street men are not at work. This change has enabled us to keep the streets freer from débris than formerly. A rotary brush street-cleaning machine has been requisitioned, and when it is placed in commission it is thought that some of the gangs now using brooms can be dispensed with and a saving in the cost of the work effected.

An index of the traffic taken at fairly active points shows as follows:

On the corner of Fifteenth Street and North Avenue, from 8.10 a. m. to 9.10 a. m. there were 335 traffic movements of all kinds. This street is 30 feet wide.

At Thirteenth Street and Central Avenue, from 10 a. m. to 11 a. m. there were 600 traffic movements. The street at this point is 26 feet wide.

At Caledonia Bridge near M Street in one hour there were 700 traffic movements. The street at this point is 26 feet wide.

The above figures show, in a measure, the difficulties that we experience in keeping the streets clean during the active hours. The general traffic conditions of the city could be greatly improved by an ordinance regulating the traffic. Under the present system all kinds of vehicles are allowed on all streets at all hours of the day, and as the traffic is far too great to be easily accommodated on the narrow streets, some arrangement should be made restricting the wagon traffic to less-used streets. This could be easily accomplished without causing inconvenience to the traffic.

The regulation of this office, recently issued, requiring all occupants of buildings fronting on the sidewalks to keep the sidewalks in a cleanly condition at all times, is being complied with by all persons concerned.

As shown in the report, 145 buildings were condemned during the month, of which number 39 were demolished as being a menace to public health and safety. One hundred and forty-eight permits were issued for repairs to buildings.

All repairs to buildings as well as new buildings under construction are supervised by an inspector who gives special attention to the rat proofing of all buildings.

#### VACCINATIONS.

During the month there were 2,820 vaccinations performed. The total since April 1, when the work started, amounts to 3,065. The work so far has been confined to school children, but will be extended so as to include all unvaccinated persons in the city as well as those who have not been vaccinated within the past five years. A check of the vaccinations performed shows that about 85 per cent are successful. No infections have been found or reported among those vaccinated.

#### INFECTIOUS DISEASES.

Four cases of typhoid fever were reported during the month. Two of these cases originated away from the Isthmus. In both cases the patients were sailors, and were not reported sick till they reached the Isthmus. One other case was reported as clinical typhoid. This leaves only one positive typhoid case originating in Panama during the month.

Detailed statistics are shown in Table XVII.

#### COLON.

The following new work has been inaugurated during the month:

A systematic inspection and examination of milk offered for sale in the city of Colon, and of cattle and beef slaughtered.

Out of 962 school children examined, 400 were vaccinated, the balance being found to be protected against smallpox.

Arrangements were made to have examinations for diagnostic purposes made for the local physicians, by the board of health laboratory, free of charge.

Steps were taken for the segregation of small craft and providing beach accommodations for same by an agreement between the Panama Government and the Panama Railroad Co.

An arrangement was made between the alcalde and the health office whereby police patrolmen will aid in enforcement of certain important sections of the sanitary code.

The department has been active in the enforcement of those sections of the sanitary code relating to rat-proof building and wharf construction and extermination of rats by trapping and poisoning.

Installation of the new sewer system for use of the residents of Colon Beach made upon the recommendation of this office to correct insanitary conditions.

Detailed statistics are shown in Table XVII.

## QUARANTINE SERVICE.

No diseases of a quarantinable nature have been received at any of the stations during the month. The plague situation to the south remains about the same.

Alleged cases of plague at Colombian ports on the Atlantic side have proved to be negative.

The plague situation at Habana, Cuba, has shown no material change, and in all probability Habana will remain infected for a long time.

Detailed statistics are shown in Table XVIII.

## ANCON HOSPITAL.

A board has been appointed to prepare plans and specifications for the erection of a permanent hospital on the sites of the old frame buildings now in use for Ancon Hospital. It is proposed that the new buildings shall be constructed of concrete and tiles and gradually replace the present structures as they wear out in use.

## BOARD OF HEALTH LABORATORY.

The laboratory has continued to do valuable work. Cultures and inoculations were made from a plague suspect taken from a ship at Balboa quarantine, with negative results.

Dr. Samuel T. Darling, chief of laboratory, was sent to Colombia, at the request of the Colombian Government, to investigate a suspected outbreak of pneumonic plague at Cartagena and Barranquilla. Cable information has been received from him that the disease referred to was lobar pneumonia and not plague.

The study of the bionomics of local ticks has been continued.

Further experimental work to determine the transmitting agent in the local type of piroplasmosis has been done.

A study of the large joints in all cases coming to autopsy has been made with special reference to punched-out areas or erosions in the cartilaginous plates and their relation to venereal diseases, senility, and occupation.

Routine observations have been made on placental smears with the idea of determining their value in diagnosing latent malaria.

Observations have been made on the incidence and any interrelation of gall stones, gastro-duodenal ulcers, and pancreatitis in negroes coming to autopsy, with special reference to those cases without evidence of clinical manifestations.

An investigation of the irregularities in the electrolytic determination of copper in the presence of ethyl alcohol has been made.

A new method for the determination of minute quantities of water in oils has been established.

A study of the action of the different constituents of the atmosphere upon larvacide when it is allowed to stand exposed to their action has been commenced.

An organism recovered from a caseous cervical gland of a Balboa rat has been worked out. It has been demonstrated that small amounts of carbolic acid in the amboceptor and alboline in the patient's serum do not influence the final results in the Wassermann reaction.

## FARM FOR THE DISABLED.

Good work continues to be done at the farm. The yield has increased and the per capita cost of caring for the disabled shows a steady decrease.

About 10 acres of ground were plowed; 8 acres were planted out to corn, about 4 acres to sorghum and kafir corn, 2 acres to yucca, 2 to yams, and 3 acres to vegetables and plants. One thousand five hundred plants were shipped to Mr. W. L. Phillips, landscape architect, Balboa, for Balboa townsite. Banana plants were cultivated and tended; some repairs made to fences, and in addition some other miscellaneous work done.

The number of patients (cripples) on June 1 was 51, two of whom were on leave; also, 30 insane patients, in charge of one nurse and and two attendants.

## INSANE DEPARTMENT AT FARM.

On April 24 an insane colony was established at the Corozal farm. At first 15 men were selected for the purpose and the experiment proved so satisfactory that the number has been increased to 30. It is expected that this experiment will prove very beneficial to the patients themselves and will also furnish a valuable source of obtaining labor for the farm.

Detailed hospital statistics will be found in Table XIII.

## COLON HOSPITAL.

It having been decided to abandon the present Colon Hospital and build a permanent emergency hospital in Cristobal, a board was appointed to select a suitable site and to make plans and specifications for the erection of the same. The board has not yet reported.

During the month an arrangement was made with the Panama Government by which the citizens of Colon could be admitted to Colon Hospital for treatment, either as private pay patients or as Panama Government cases. Except for this purpose the hospital continues for emergency cases only

## CHRONIC DEPARTMENT.

There were 27 chronic and incurable patients constantly cared for during the month.

Detailed hospital statistics will be found in Table XIV.

## PALO SECO LEPER ASYLUM.

Conditions continued as usual at this asylum. The number of patients at the end of the month was 49, divided as follows: Adult males, 31; adult females, 11; male children, 4; female children, 3; whites, 5; and colored, 44.

Detailed statistics are shown in Table XV.

## SANTO TOMAS HOSPITAL.

During the month a total of 1,216 cases were treated, an increase over the previous month of 124, with a total of 11,223 hospital days, as compared with 9,989 days for the previous month. During the month of May an average of 360 patients per day were treated, and on May 28 the hospital census showed 393 patients in the wards. Our capacity has been taxed somewhat as we can care for about 400 patients per day. Our subsistence cost remains approximately the same, at 27 cents United States currency per day, while our per capita cost was 86 cents United States currency per day.

The deaths during the month were 60, the same as the previous month, while the births numbered 90, as compared with 87 for the previous month.

Malaria is the predominant disease treated, followed by syphilis, bronchitis, tuberculosis, and pneumonia in their order.

Among the diseases causing death, pulmonary tuberculosis is predominant, followed by lobar pneumonia, traumatism, dysentery, and nephritis.

During the month there has been one case of typhoid fever, a notable decrease over the previous month, one of leprosy, one of scarlet fever, and one of pellagra treated.

The nurses' home has been completed and is now occupied and the quarters to be used by the pupil nurses are being put in condition. The general condition of the hospital buildings is good, and such repairs as are necessary are being made.

Detailed statistics are shown in Table XVI.

## SICK CAMPS.

The only sick camp remaining in use at the end of the month was a small one for prisoners at the Gamboa penitentiary, and this will be treated hereafter as a dispensary.

## DISTRICT DISPENSARIES.

At the end of the month we had 11 still in operation. The district having the largest admission rate for malaria was Corozal with an average weekly percentage of 0.45; that having the lowest admission rate for malaria was Gatun, with a percentage of 0.04.

Detailed statistics are shown in Table IX.

## VITAL STATISTICS.

TABLE I.—DEATHS OF EMPLOYEES OF THE PANAMA CANAL AND PANAMA RAILROAD.

TABLE XVII.—SANITARY WORK IN CANAL ZONE, PANAMA, AND COLON.

The following is a summary of sanitary work performed and material expended during the month in the Canal Zone:

Work requests on quartermaster's department:	
Grass cutting.....	10
Screening.....	15
Miscellaneous.....	13
Work requests on engineering department.....	30
Work requests on other departments.....	1
Notices served to abate nuisances.....	137
Arrests for violation of sanitary regulations.....	6
Convictions.....	4
Building permits approved.....	5
Inspections of closets.....	2, 273
Inspections of stores.....	298
Inspections of restaurants.....	77
Inspections of shops.....	199
Garbage cans emptied.....	132, 366
Closets disinfected.....	5, 344
Houses disinfected.....	2
Rat traps used daily.....	1, 298
Adult anopheles destroyed in houses.....	5, 094
Adult culices destroyed in houses.....	20, 213
Larvacide used..... gallons.....	4, 197
Crude oil used..... do.....	24, 888
Rats destroyed.....	815

Following is a summary of routine work done by the health office, Panama, during May, 1914:

<b>Mosquito work:</b>	
Linear feet of ditches cleaned and maintained.....	24,500
Cubic yards earth used in filling.....	30
Gallons larvacide used.....	519
Square yards pools oiled.....	58,845
Water containers treated.....	50,556
Mosquito breeding places found.....	1,400
Fly breeding places found.....	1,110
<b>Garbage collections:</b>	
Loads garbage from yards removed to dump.....	4,921
Loads garbage from cans removed to dump.....	4,346
Total cans garbage emptied.....	99,541
<b>Buildings:</b>	
Buildings inspected.....	8,209
Plans for new buildings approved.....	30
Permits granted for repairs to old buildings.....	148
Buildings condemned.....	145
Buildings demolished.....	39
<b>Street cleaning:</b>	
Average number of square yards streets cleaned daily.....	600,000
Average number square yards streets sprinkled daily.....	100,000
Private properties cleaned during month.....	10
Notices served and nuisances abated.....	45
<b>Vaccinations:</b>	
Vaccinations during month.....	2,820
Vaccinations since Apr. 1, 1914.....	3,065

#### COLON.

[Including Cristobal, Mount Hope, and Toro Point.]

#### COLON.

<b>General sanitation:</b>	
Square yards streets cleaned.....	4,073,226
Square yards alleys maintained.....	688,371
Loads garbage, cubic yards.....	449
Private properties cleaned.....	105
Rats killed.....	68
Cans garbage.....	67,028
Cubic yards garbage.....	2,105
Linear feet ditches maintained.....	1,564
Square yards vegetation removed.....	72,900
Square yards oiled.....	15,300
Receptacles treated.....	24,900
Mosquito breeding places destroyed.....	106
Fly breeding places destroyed.....	142
Buildings inspected.....	3,650
Notices served and nuisances abated.....	239
(Colon and Cristobal garbage disposed at Ninth Street dump, Colon).	
<b>Buildings:</b>	
Plans approved.....	2
Permits to repair issued.....	58
Permits to occupy issued.....	2
<b>Sewers (reported by division of municipal engineering):</b>	
New connections made during month.....	3
Total connections made to date.....	1,145
Houses in which extensions were made.....	1
Outstanding permits.....	61

#### CRISTOBAL.

<b>Sanitation:</b>	
Square yards pools oiled.....	3,000
Water containers treated.....	3,670
Mosquitoes killed in barracks (anopheles, 648; culices, 1,740).....	2,388
Mosquitoes killed in cars (anopheles, 1,689; culices, 496).....	2,185
Mosquito breeding places destroyed.....	13
Fly breeding places destroyed.....	18
Buildings inspected.....	360

## MOUNT HOPE.

## Sanitation:

Square yards oiled.....	11,600
Receptacles treated.....	29,150
Mosquito breeding places destroyed.....	273
Cubic yards ditches constructed (open).....	108
Linear yards ditches maintained (open).....	17,986

## TORO POINT.

## Sanitation:

Square yards oiled.....	6,150
Number of mosquitoes killed (anopheles, 658; culices, 377).....	1,035
Yards ditches maintained (open).....	2,922
Doses quinine issued.....	1,170

TABLE XVIII.—QUARANTINE TRANSACTIONS AT THE PORTS OF BALBOA AND PANAMA FOR THE MONTH OF MAY, 1914.

Vessels inspected and passed.....	14
Vessels inspected and held in quarantine.....	12
Total vessels inspected.....	26
Vessels fumigated on arrival.....	11
Crew examined.....	1,820
Passengers from foreign ports examined and landed:	
Cabin.....	573
Steerage.....	138
	711
Total persons examined.....	2,531
Persons vaccinated at ports of arrival because of compulsory vaccination law.....	15
Persons vaccinated at ports of departure or en route because of compulsory vaccination law.....	737
Total persons vaccinated.....	752
Persons held in quarantine at the detention house to complete period of incubation for fever or plague.....	169
Persons held in quarantine on board vessels to complete period of incubation of yellow fever or plague.....	1,641
Total persons held under observation.....	1,810
Persons embarked for foreign ports:	
Cabin.....	340
Steerage.....	149
	489
Persons arriving from coast towns in small launches and sailing craft.....	2,233
Persons sailing for coast towns in small launches and sailing craft.....	2,077
Number of bills of health issued.....	29
Number of certificates issued to outgoing passengers.....	21
Number of certificates refused on account of trachoma.....	2
Total persons landed.....	2,944
Total persons sailing.....	2,566
Apparent increase for the month.....	378

QUARANTINE TRANSACTIONS AT THE PORTS OF COLON AND CRISTOBAL FOR THE MONTH OF MAY, 1914.

Vessels inspected and passed.....	106
Vessels fumigated on departure.....	5
Pieces of baggage handled and stored.....	102
Crew inspected.....	9,558
Passengers inspected.....	5,575
Total persons inspected.....	15,133
Persons vaccinated in port on arrival.....	675
Persons vaccinated in ports of departure or en route.....	692
Total persons vaccinated.....	1,367

Persons detained in quarantine to complete period of incubation for yellow fever and plague.....	268	
Persons detained on vessels.....	202	
Total persons held under observation.....		470
Total persons landed from foreign ports:		
Cabin.....	1,754	
Steerage.....	1,802	
		3,556
Total persons embarked for foreign ports:		
Cabin.....	2,109	
Steerage.....	2,305	
		4,414
Persons in transit.....		1,544
Persons from coast towns (inspected).....	475	
Persons from coast towns (not inspected).....	294	
Persons leaving Colon for coast towns.....	271	
Persons landed during month:		
For immigration report.....	4,019	
For Pacific ports.....	306	
		4,325
Bills of health issued.....	9	
Bills of health viséed.....	25	
Persons recommended for deportation.....	2	
Certificates issued to outgoing passengers.....	6	
Persons refused certificates on account of trachoma.....	2	
Total persons landed.....	4,325	
Less number for Pacific ports.....	306	
		4,019
